Christopher Nottle

Business systems · AI and automation · User support and training

Auckland, New Zealand | chris.a.nottle@gmail.com | linkedin.com/in/chris-nottle

PROFILE

I spent nearly seven years as a Purchaser at Häfele New Zealand, in SAP every day, buying from suppliers in Australia, Germany and Asia. I trained new staff there, and I started out doing IT support for the whole business of about 50 people.

Since then I've built two products by directing AI coding agents. KeaClip, a Windows app, has had 12 public releases. SwimSorted, an app for pool technicians, is live as a demo. The agents write the code. I set the direction and the rules they work under, decide what ships and test it myself. I'd like a role where I help a team put AI and automation to practical use.

KEY SKILLS

Business systems	SAP every day for nearly seven years: purchase orders, purchase requisitions, material records and supplier price records. Excel, Outlook and Teams daily.
Working with people	Dealt with managing directors and purchasing teams at other Häfele companies, and with local and overseas suppliers on rates, minimum orders and discounts. Trained new staff in purchasing and IT.
AI and automation	Daily user of Claude and ChatGPT. Claude is connected to my Gmail, Google Calendar and Google Drive and 11 other services, with 10 saved skills for repeat jobs.
Testing and release	By KeaClip's latest release, nothing could publish unless 1,433 automated tests and a 41-check installer test passed. I also test by hand, and have found faults the automated tests missed.
Safe use of AI	The AI drafts and recommends. It doesn't buy, publish, send or permanently delete without my say. I stopped a domain purchase until the name was checked, and had hard spending limits added before a cloud service went live.
Support and training	Up to around 1,400 player requests a day at Grinding Gear Games. IT support for about 50 staff. Taught English in Osaka, Japan for about a year.

BUSINESS SYSTEMS EXPERIENCE

Purchaser

January 2018 - November 2024

Häfele New Zealand

- Bought stock from Häfele's companies in Australia and Germany, and earlier from Asia, by sea freight, part-container loads and air courier. This included dangerous goods and oversized items.
- Placed orders of up to around NZ$500,000 in a busy fortnight.
- Used SAP every day for purchase orders, purchase requisitions, material records and supplier price records, and ran weekly stock forecasts in SAP and Excel.
- Worked out contract rates, minimum order quantities and bulk discounts with local and overseas suppliers, and dealt with managing directors at other Häfele companies.
- Matched supplier invoices to purchase orders and sorted out differences with suppliers.
- Trained new purchasing staff.
- Worked alongside Dell's team for several months to wipe, clean and rebuild staff computers after a company-wide cybersecurity incident.

IT Support

2016 - 2017

Häfele New Zealand

- IT support for the whole business of about 50 staff: troubleshooting, equipment and system updates. Trained new staff on the systems.

AI PROJECTS

SwimSorted Own product since October 2026, website and demo live swimsorted.co.nz

- My own product for pool technicians and small pool service teams, started in October 2026. I make the product decisions and test it myself. AI coding agents write the code.
- A technician enters a water test and the app works out each dose. Every dose has a safety limit, and the dose calculations were checked against PoolMath on 26 cases.
- About 130 changes merged in four weeks, backed by more than 3,000 automated tests. A security policy is enforced on the live site.
- Before buying the domain I had the name checked. It was a registered trade mark in Australia, so I renamed the product.
- Sign-ups open in December 2026. There are no customers yet.

KeaClip Windows app, 12 public releases langkurst.github.io/KeaClip

- A free Windows app for saving, trimming and sharing video and audio, with no ads, account or tracking. Released in October 2026.
- I wrote the 49-section brief and decided what shipped. AI coding agents wrote the code, the website and the user guide to my rules and plain style.
- 12 public releases in 15 days. At the latest, 1,433 automated tests passed and none failed.
- It installs without admin rights and updates only when the user agrees. Each release publishes checksums, and a public list sets out 30 known limits.

AI set-up Daily use

- Saved skills for repeat jobs, including software releases, plain-English wording checks and an inbox clean-up that only moves clear junk to Trash and leaves anything about jobs, money or health alone.
- Two scheduled tasks checked KeaClip's bug reports and inbox twice a day. They drafted replies and recommended fixes, and never sent or changed anything.

WORK SINCE HÄFELE

Pool Valet Technician January 2026 - present
The Pool Guy · casual

- Routine cleaning and water testing for residential pools. SwimSorted is built on this work.

Display Installer 2025
Atlantis Bathrooms · family business

- Installed shower displays in Mitre 10 and plumbing merchant showrooms.

Player Support Specialist December 2024 - February 2025
Grinding Gear Games · temporary, via Madison

- Answered 700 to more than 1,000 player requests on most days of the Path of Exile 2 launch, and around 1,400 on the busiest.
- Sorted out account, technical and purchase issues, and passed the harder problems to the right team.

EDUCATION

Diploma in Network Computer Engineering 2014 - 2015
Avonmore IT Tertiary Institute

Introduction to Pool Operations, NZQA Unit Standard 20046 June 2026
Environmental Training Centre

NCEA Levels 1, 2 and 3
Albany Senior High School

OTHER

New Zealand and British citizen, and able to work in Australia. Full New Zealand driver's licence. Available now for remote, hybrid or on-site work. Referees available on request.
